

## Software Developer (Web-Application) - Co-Founder (m/f)

### The main technologies of our applications are

- Main application: PHP, Zend-Framework, Doctrine, MySQL, Twitter Bootstrap, jQuery
- Additional: Scala, Play-Framework

### Our offer

- A great opportunity to be a part of the next big change in the vacation rental market.
- Significant shares of a start-up that already has a software product and real costumers.
- To learn and benefit from working with people with extensive start-up and technology backgrounds.
- Over time, you will be responsible for our product, its technologies and that it's working for thousands of users. You will prepare and code new, cool features and ensure technological excellence to heavily scale our product. If necessary, we will include outside advisors upon your request.
- A great loft office with everything you need and a positive atmosphere. We are part of an upcoming company builder in Berlin and benefit from working alongside other start-ups.

### Your profile

- You are willing to invest many hours to fulfill our common vision. Your attitude: Getting things done. It is important for us to find a Co-Founder not an employee.
- You are a good coder who takes responsibility for our product and you implement new features independently.
- You enjoy building the front- and backend of our software and you are eager to learn from the senior developers of our company builder.

### About Smoobu

Landlords lose 10,000€ per year for each rental due to vacancies and they waste a lot of time managing their vacation home. With Smoobu, landlords can control and improve the marketing of their holiday homes. We exponentially increase market presence and automate the vacation rental business.

We are looking forward to talk to you! Simply send your CV to Fabian ([career@smoobu.com](mailto:career@smoobu.com)). Feel free to ask questions upfront.
